

Cancer

Note:

About PDF links:

If you just left click it, the link will open but it will replace the PDF. To bring it back (back button), the PDF will have to reload. This can take awhile. Ctrl click will open the link in a new tab so you have both open at once.

This happens because the PDF makers have been too preoccupied with trying to keep Dick Cheney from hacking into their websites and stealing all their money and they haven't had time to figure out this link mess.

I have humming bird feeders, they attract ants and the ants bother the humming birds. So occasionally, I brush off the ants and move the feeders. Among the ants, there are scouts whose job is to find new, or relocate, food sources that have been moved. After a while, the scouts find the feeders in their changed locations. They go back and find the disoriented ants which can be anywhere from 6-8 feet away or all the way back to the colony/nest (20-30 feet away). By way of some complex language (part chemical; part movement), known only to ants, the scouts communicate complicated information which specifies/defines/maps out, the exact new locations of the feeders. Very shortly, the other ants, have formed into steady streams that go straight to the feeders in their new locations.

Bees are very important to my garden so I watch them, and they also do, essentially, the same thing. I notice a scout that has just found my flowers. It doesn't linger long. It goes back to the hive, which can be miles away. The scouts do a complicated little dance among the other bees, which communicates the exact location of the flowers. In a short while, my flowers are swarming with bees. Note: **Root Beer** works even better than flowers for attracting bees.....not Coke, Dr. Pepper or any other soft drink.

Many **insects communicate** complex, and sometimes even abstract, information. All living things, and some non living e.g. computer language is called **Binary Code**, to some degree or other, communicate.....have languages. The **cells** that make up our bodies, are constantly chattering with each other. Some of this is simple e.g. hey, move over! Some is **much more complex**. Even itty-bittys like **molecules communicate**.

The point is, that sound e.g. our **babble**, birds singing, dogs barking etc. is not the only way of talking.

All the cells in our bodies (that have a nucleus), come with a blueprint (design/owner's manual) that defines the cell, its function, where it belongs, what it does, why it does what it does e.g. nose cell, eye cell, toe cell, elbow cell, lung cell, butt cell, brain cell, liver cell etc. This blueprint is contained in **Genes (Chromosomes)** which are made of stuff called Deoxyribonucleic Acid - **DNA**. A bunch of these things are contained/organized in a thing called a

Genome. All this monkey business, we being the monkeys, and our study of/stuff about it, is called Genetics.

We monkeys record, study and learn nothing from history. If we learned from it, WAR would have become obsolete thousands of years ago. But there's always an abundance of WAR, because history always repeats itself. We continue to do the same idiot crap over and over again. And, of course, it (WAR) kills plenty of us.

But throughout our history, what kills more of us, by far, is Cancer! I can't prove it now, because all those I told about it back then are dead now. But about fifty years ago, I figured out how we would eventually deal with/cure Cancer. So I'm saying it again now.

It's all about communication/language and genetics. I know I was right because fifty years ago, nobody was thinking about this. Within the last 25-30 years, sciences (research people et.) have started thinking about it and my conclusion is beginning to be confirmed. They haven't exactly hit on it yet but they will soon.

Cancer is caused when things (carcinogens) e.g. tobacco smoke, radiation, asbestos, infections etc. and things that shouldn't be there, start bothering/annoying normal cells. And cells are smart. When the nuisance/bad thing e.g. smoke is present, the cells near it have a defense. The blueprint changes (They mutate into a different kind of cell that the bad thing can't hurt). The problem here is that the new kinds of cells are NOT supposed to be there either!

Where there should be normal Lung, brain, breast, liver, pancreas etc. cells, there are the tough, carcinogen resistant cancer cells and they start taking over and cause the organ/body part to malfunction.

Now comes what to do about this. The cancer fighting people (Oncologists/Oncology) have to learn to “speak” the language of the cells, genes/chromosomes, molecules, genomes etc. There are some scientists who are beginning to learn to do this but they are usually working in other fields. The cancer folks need to get the cell language folks in on what they’re doing and collaborate.

When the cancer folks get fluent in the cell language, they need to talk to the cells, and this is what they need to say: OK all you cells, you’ll need to calm down and stop all this mutating. And the cells reply, oh yea, well what are we supposed to do about all this bad stuff e.g. smoke? Cancer folks: We’re going to take away all the bad stuff and keep it out so it won’t be bothering you anymore. So you’ll just go back to doing what you’re supposed to be doing. If you’re a lung cell, stop mutating into a cancer cell. Go back to being a normal lung cell.

Of course, the well established cancer cells would not like this if they could hear it. But they have created their own shield/force field (like Starship Enterprise) around themselves so they don’t have to listen to this blasphemy. And even worse, is that this shield fools the body’s immune system so that it doesn’t recognize (can’t see) and kill the cancer cells.

But that's OK, because there are some oncology folks who are figuring out what to do about this too (<http://goo.gl/V8jOvt>). It still has some problems but it's coming along well.

Note: I'm not professionally trained in any of these fields. So I may have used some of the terms loosely/incorrectly, but the message/point is still the same. Learn to speak the body's language and deliver the message to its components: We'll take away the bad stuff. Now you'll quit screwing around with the blueprint and go back to doing what the original was telling you to do in the first place!

Knock on my head (wood), I'm still OK (no **C** yet) but I never know what they might find every time I go to the VA. If I get it, none of this stuff will probably be in time for me. But I will have said my bit about it anyway.
